Backend Engineer (Java / Spring Boot)

Northbridge Payments

Ho Chi Minh City (hybrid, 3 days onsite) | Full-time | 2–5 years experience

ABOUT THE ROLE

Northbridge Payments is building a next-generation merchant settlement platform processing millions of transactions daily. We're hiring a Backend Engineer to design and operate core services on our Java/Spring Boot stack, working closely with product and infra teams to keep the platform fast, correct, and auditable.

KEY RESPONSIBILITIES

- Design, build, and maintain RESTful microservices in Java (Spring Boot) that power transaction processing and merchant settlement.
- Own data modeling and query performance for PostgreSQL-backed services handling high write throughput.
- Build event-driven integrations using Kafka to keep downstream ledgers and reporting systems in sync.
- Write thorough unit and integration tests; participate in code review and on-call rotation for production services.
- Collaborate with product managers to translate settlement and compliance requirements into technical designs.

REQUIREMENTS

- 2+ years of professional experience with Java and Spring Boot in a production environment.
- Solid understanding of relational databases (PostgreSQL or MySQL), including indexing and query optimization.
- Experience with REST API design and at least one message broker (Kafka, RabbitMQ, or similar).
- Familiarity with Docker and basic containerized deployment workflows.
- Comfortable writing automated tests (JUnit, Mockito) and debugging production issues.

NICE TO HAVE

- Experience in fintech, payments, or another highly regulated domain.
- Exposure to Kubernetes and CI/CD pipelines (Jenkins, GitHub Actions).
- AWS or GCP certification.

BENEFITS

- Competitive salary with annual performance bonus
- Premium health insurance for employee and dependents
- Hybrid work model and flexible hours
